

# COVID-19 infection prevention measures as our Forum

Since May 8, 2023, there have been no more COVID-19 measures in Tokyo Tech. Regardless of this, measures mentioned below will be implemented to have our Forum successfully and safely.

- Venue ventilation
  - Ventilation is carried out by opening the doorway between programs
- Health check before departure
  - Manage your own physical condition, contact and declare if there is a problem
  - If you're diagnosed positive, on-site participation should be cancelled.
- Physical condition management during the forum
  - Manage your own physical condition, contact and declare if there is a problem
  - When a student is sick, he/she may be requested to have examined by a doctor based on the symptoms he/she has, considering that students share a room. If he/she is diagnosed positive for Covid-19 and is instructed isolation from other students by the doctor, he/she will be isolated in another room.
  - All the costs for medical care, additional room charge for isolation, extended stay and change of flights etc due to the medical treatment should be paid by yourself. Please prepare for sudden illness or unexpected injury and purchase overseas travel insurance. Coverage may differ by insurance you purchase. Please check them on your own.
- Wearing a mask is not mandatory. When you don't feel well, please wear a mask to protect yourself and others.
- Pack your mask and medicine for the trip.
  - Different weather and food conditions, plus fatigue from long trips can have some impact on your immune system. Bring your mask and medicine for the trip. We recommend you bring your thermometer to monitor your condition.

\*We may update the measures due to the dynamics of the situation.
